Quality Education: Goal 4 At Risk

In its report about the Pandemic impact on Sustainability all over Italy, ASviS indicates that goal 4 of the 2030 Agenda is particularly at risk and its expected impact could be largely negative. In this scenario, sustainability issues (and therefore those related to the food supply chain) are at risk together with educational ones. Our "B Corp School" project involves thousands of young changemakers and the Italian B Corp Network in regenerative education projects with a particular focus on food, circular economy and zero waste. Our goal is to build bridges between young talents and regenerative companies and support them in the creation of start-up projects in their communities.
...COSA VI VIENE IN MENTE QUANDO SI PARLA DI SVILUPPO SOSTENIBILE ...?

OUR RESILIENCE STORY
"We have worked hard with all our energy, our passion and enthusiasm, to ensure the continuity of the educational service we were offering to our school network. At the same time, we realized that this was not enough, and we made our service "Open" to all Italian schools of all levels that requested it, by signing a protocol with the Italian Ministry of Education".
200% Teachers
Attended InVento Lab webinars during the Pandemic, realized thanks to the signing of the protocol with MIUR
